

An Interview with 'Henry Deacon'

a Livermore Physicist

September 2006 – December 2007

http://www.projectcamelot.net/livermore_physicist.html

This interview was transcribed from video as the interviewee expressed a wish to remain anonymous ('Henry Deacon' is a pseudonym, prompted by his similarity to the likeable and creative polymath on the Eureka TV series). Certain details have been deleted and/or amended in order to ensure that his identity remains concealed, and the transcript has been "cleaned" of most expressed natural hesitations and the like. Meanwhile, it is most important to note that none of the factual information disclosed has been altered or amended in any way.

Henry's name and employment details are known and verified and we were able to meet with him personally more than once. He was understandably a little nervous but definitely wanted to talk with us. In conversation, he sometimes responded with silence and meaningful glances or enigmatic smiles rather than words. He was entirely disarming, in a very quiet way, and was not always certain about what he should or shouldn't say. At times, however, he took great pleasure in revealing the truth about some key matter in a way that could not be traced back to him. One or two supplementary details were provided by e-mail after the interview.

The most important piece of additional information comes at the very end of the transcript, where Henry confirms Dan Burisch's testimony.

Readers are welcome to distribute this freely with the proviso that no part of it must be altered or deleted. Unaltered extracts can be quoted if the context is made clear. We consider this interview to be extremely important and in our opinion the information revealed should be made widely known.

For further information from Henry, updated in February 2007, please [click here](#). However, it's probably best to familiarize yourself first with the material presented below as an introduction to Henry and his testimony.

[Click here](#) for a further update (May 2007)

We have heard nothing from Henry Deacon for the last five weeks. Prior to our last communication, in the last week of March 2007, he had told us he was being 'coerced'. Up to that time he had been in very regular communication with us. We now feel certain he has been forced into silence.

While this newest update contains fascinating further information on a number of topics (including more information on Mars and some details of the inside story of 9/11), we continue to believe that the most important information he has shared is to be found in the second update. However, as stated above, new readers are advised to read Henry's testimony in sequence.

Please tell us a little bit about yourself – as much as you feel you can.

I'm a current employee of one of the three letter agencies [he plays a little word game with us until we guess the right agency, which he then confirms]. I'm probably taking quite a risk by speaking to you like this, though I don't intend to reveal any information that in my judgment is both classified and specific to national security. I've been involved in many projects with many different agencies over many years.

To jump right in at the deep end, I believe I was a walk-in around eighth grade. I have memories of coming from another planet, and these are all mixed up, all mingled with human boyhood memories. It's very weird, and hard to explain what it feels like. I've never had any problems intuitively accessing complex scientific information and I've often found myself understanding complex systems with no detailed briefing or training. I work essentially with systems. I don't mean to be arrogant, but I do know a great deal of advanced information, scientific and otherwise. I just seem to know it. I can't say more than that right now.

Can you give even any clues about which agency you work for?

No, not on public record. I just can't afford that.

What information do you feel you have that's important for the world to know?

There's so much that it's hard to know where to start.

I knew about 9/11 two years before the event, for instance. Not in specific terms, but certainly in general ones. It was talked about, an event like that, something that would change the game, let's say.

I know that there's a planned war between the US and China scheduled for late 2008. This is also geopolitical and not concerned with Black Ops as such. These were both just events that I got to hear about in passing. I have no detailed information about them.

You mean that China and the US are working together to stage a war?

The Pentagon started the planning in 1998. You have to understand that China and the US are hand in glove with everything. This war is a joint op between the US and China. Most wars are set up that way and have been for a while.

You want something else that's just unpleasant to hear? I also heard from someone who was serving in a unit that worked with missiles deployed for testing in the Pacific and the Far East. The missiles were shipped to the test location in very tightly sealed containers, very secure, hermetically sealed. After the tests, the container would be shipped back, sealed the same way, but empty, supposedly empty. On one occasion, this guy was present when a container was opened. It wasn't empty. It was filled with bags of white powder.

Cocaine?

I leave you to draw your own conclusions. I doubt it was sugar. Let me just say that, hypothetically speaking, and let just me say that to protect myself, if such a plan was in operation, it makes perfect logistical sense as it's a totally secure way to get around all security, customs, international boundaries and ports, and all those checks. It's perfect, like the way guns and ammunition used to cross borders in diplomatic bags going between consulates. This happens all the time.

Would you call yourself a physicist?

Yes. I cover other specialties as well, but yes, I'm a physicist. And I specialize in systems. Livermore is a good place to be, everyone's very professional there. They don't, you know, they don't play games there.

What can you say about the current state of physics in the military-industrial complex?

It's dozens of years ahead of mainstream physics which is published in journals in the public domain. There are projects dealing with subjects beyond the belief or experience, beyond the imagination, of many public domain physicists.

Can you give us any examples?

[long pause]

There's a project called Shiva Nova at Livermore which uses arrays of giant lasers. These are huge lasers, huge capacitors, many terawatts of energy, in a building built on giant springs [extends his arms to show the size], all focused on a tiny tiny point. This creates a fusion reaction which replicates certain conditions for nuclear weapons testing. It's like a nuke test in lab conditions, and there's very powerful data collection focused on that point where all the energy is focused.

The problem is that all extremely high-energy events like this create rips in the fabric of spacetime. This was observed back in the early Hiroshima and Nagasaki events, and you can even see it in the old movies. Look for what looks like an expanding energy sphere, and I can send you a link to show you. The problem with creating rips in spacetime, whether they're big or little, is that things get in that you don't want to be there.

Things get in?

Things get in. Things that we all know about that are discussed on the net a lot. Beings, and influences, and all kinds of weird stuff, and I can tell you they've created big problems.

What kind of problems?

[pause]

The problem of their presence and then what happens next. The other problem is that if you're creating rips in spacetime you're messing with time itself, whether you mean to or not. There have been attempts to fix that, and it all results in a complicated overlay of time loops. Some

ETs are trying to help, and others, others are not. When predicting futures, we can only talk about probable and possible futures. This is all extremely complex and very highly classified. Basically, it's just a huge mess. We've opened Pandora's Box, starting with the Manhattan Project, and we haven't yet found a way to deal with the consequences.

The problem of multiple timelines sounds like the information reported by Dan Burisch... can you comment on that?

[shakes head] I don't know about any of that.

OK. We'll send you the links so that you can see the interviews. But what you're saying also corroborates the information reported by "Mr X" on the Camelot website. Have you seen or read those interviews?

No, what does he say?

"Mr X" is an archivist who for a six-month period had the opportunity to work with classified documents, films, photos and artifacts back in the mid-80s when he was working on a special project with a defense contractor. He says that he read that the principal reason for the ETs' interest in us was because of nuclear testing and the general threat of nuclear weapons.

That sounds about right. Except only one or two ET groups are concerned about nuclear weapons, not all of them.

OK. What else can you tell us about the timeline problem?

Just that it's unresolved. The risk is, you see, that each time we try to fix it, it adds to the problem. It just gets worse all the time.

Are the aliens – or some of the aliens – time travelers? Dan Burisch states this.

Yes.

Do you know about the Montauk Project?

That caused a huge problem, and generated a... created a 40-year loop.

I don't know about Al Bielek. I believe some of his information is suspect. But something like that definitely did happen, the Philadelphia Experiment, too. John Neumann was very involved in all of that.

And Tesla, and Einstein?

Don't know. But Neumann... [nods head]

Montauk was real?

Yes. That was a real mess. They created a time split we're still unable to mend. Now, understand this also relates to Project Rainbow, the Stargates... they were also working on that there. But some of the Montauk reports on the net are unconvincing to me. I've seen some of the photos of the equipment they're supposed to have used, and it's junk, just a pile of junk.

[Bill] I've always had a problem with the idea of time portals because I don't see how or why they'd stay with the planet at a certain location as it moves through space. If a portal was created in spacetime, you'd expect it to be left behind somewhere very quickly as the earth rotates, and moves round in its orbit, and the solar system itself is orbiting the galaxy in a huge cycle. I mean,

everything's in motion, all the time, and this is well known. Can you explain this?

No, I can't... but I know what you mean, and the portals do stay in specific locations, kind of anchored to this planet. That does happen that way. Why they don't get left behind or just kind of float off somewhere, I have no idea. Maybe they're gravitationally anchored in some way. Your guess is as good as mine.

One of the portals connects to Mars, and it's a stable connection, no matter where Earth and Mars are in their orbits. We have a base there established in the early sixties. Actually, we have a number of bases.

So we've explored Mars already.

Sure, a long time ago. Have you seen Alternative Three?

Yes.

That had some truth to it. The Mars landing video was all a spoof, and other parts of it were as well, but there's truth there.

What else do you know as a physicist working on these projects?

OK. This may interest you if you have a physics background. You know what signal non-locality is, right? When two particles in different parts of the universe can apparently communicate with each other simultaneously, no matter what the distance. Communications devices have been made for communicating across vast distances and also locally using a methodology that's impossible to eavesdrop on, because there's nothing traveling between the two devices that can be intercepted. It's impossible to crack or codebreak or eavesdrop because no signal travels anywhere, so there's no signal to be intercepted or decoded. It just doesn't work like that.

The beauty of it is that the devices are actually so simple to build. You can create two chaotic circuits, on a couple of small breadboards using cheap components which anyone can buy, and they communicate with each other in this way. You can build these if you know how.

Are there any other applications besides communication?

[pause]

Yes.

What else can you tell us about this?

That's it. Oh, I should say that I didn't realize at first that you were also the guy who created the Serpo website. Let me just say that it wasn't called by that name. And I doubt that the travel took nine months. That's not how they traveled there.

Oh, you mean the travel was instantaneous?

[pause]

I don't think they traveled the way they say they did on the Serpo website. Maybe there were other programs. There may have been many. But travel across large distances is best done using portals. Anything else is really... it's just inefficient.

You mean they used Stargates?

I guess you could call them that, yes.

I also suspect the system isn't Zeta Reticuli. It sounds to me like Alpha Centauri. I think you mentioned this on the site.

Do you have a reason for saying that?

Well, Zeta 1 and 2 are a long way apart from one another. Alpha Centauri and Proxima Centauri are close together. Alpha Centauri has a solar system very much like ours, but it's older. The planets are in stable orbits. There are three inhabited planets, the second, third and fourth. No, wait, the fifth, I think. Second, third and fifth.

That's astonishing... you knew this professionally? I mean, you came across this in the course of your work?

Yes. This is known. It's comparatively easy to get there, less than five light years away, and that's, you know, it's right next door to us. The... people... there are very human-like. They're not Grays, they're like us. The human form is very common in the universe.

[Bill] Is one of the planets desert-like? That's what I saw in the photo I described. Two setting suns, over a desert landscape. It really blew me away. [See this article on the Serpo website]

Yes, it is. A desert planet.

Wow.

Are you familiar with Project Looking Glass?

That sounds kind of familiar...

It was a kind of technology that Dan Burisch told us about that involved seeing into the future. Were you involved with it?

OK, that technology wasn't developed by us. We were given it, or it was taken from a craft we acquired. I didn't work on that.

We heard they have a man-made Stargate at Los Alamos. Are you familiar with that?

[looks at us without answering, slight enigmatic smile]

What can you tell us about Los Alamos?

There's a Los Alamos website I'll send you, and then you can search there under "gravity shielding" and things like that. It's all there.

[Note: the website is <http://lanl.arxiv.org>.]

Now, it may have been an error that it's in the public domain. You might want to advise people to archive the pages they find there before they're taken off the web once this gets out, if it does. But right now you can see it with your own eyes.

It's hard to know what else to say.

What can you tell us about the ET presence?

Look up the movie Wavelength. It's based on a totally true story. Have you seen it? It's based on an incident that took place at Hunter Liggett. This is a hot one.

No. Where's Hunter Liggett?

90 miles south-south-east of Monterey, California. My primary station at the time was Fort Ord.

I was working there back in the early 70s, when I was in the military, and I was working under CDCEC, which is Combat Developments Command Experimentation Command. You can go look that up.

We were doing testing of all kinds of devices, and we lived out in the field there. We wore laser protection goggles a lot of the time and we had our eyes dilated routinely to check our retinas for burns. Some of the cattle in the

fields even wore modified goggles! This was the most bizarre sight you could ever imagine.

Well, one day something happened while we were testing. A disk came into the area and it was hovering, it hovered right directly in front of us, out in a field. So [pause] we shot the ****ing thing down.

You shot down a disk?

[shaking head] We should never have done it. It wasn't me personally, but the group did. Between us we had all this gizmo weaponry and I guess they panicked and thought they were in a movie or something. The disk was disabled and it was captured, and so were the occupants, and I saw these very briefly. They were small child-like humanoids, with no hair. And they had small eyes, not large almond-shaped eyes. I don't think anyone knows about this. As far as I know it's not on the internet.

This is incredible. I've never heard of this incident.

Most of the other witnesses ended up in Vietnam and many were killed. I may be the only living witness to what happened... I don't know.

The rest of the story is in a sci-fi movie called Wavelength, which was released in the early '80s. I'd never heard of it until I ran into it years later, in Arizona. Did I just say this? [laughs, for the first time]

When I saw the video, I was expecting some, you know, light entertainment with a beer or two, but I mean, my mouth just hung wide open. The beginning of the film just completely clearly and accurately describes the incident, and the film is very close to the rest of the story, including the use of an abandoned Nike base in Southern California to store them.

Go find it. It's all basically true. I was just amazed when I saw it. The person who wrote it must have been there, or knew someone who was there. But I don't know who.

I had a genuine alien photo once. I showed it to someone, a woman, a very talented woman, who was a microbiologist working for one of the agencies. It scared the s*** out of her. I couldn't believe it. She just didn't want to deal with it at all. And I'd say that just suggests that the public, even scientists aren't ready for this information to be released. And this person was really smart. It didn't stop her from freaking out, just not wanting to know. She was just, you know, totally spooked.

Do you still have the photo? Can we see it?

I don't know. I may still have it somewhere, and if I can find it, I'll forward it to you.

Can you describe it?

It showed a small being with dark skin, kind of black and wrinkled. He was a sole survivor of an incident. But he died shortly afterwards. He had a suit that was self-healing, ah... self-repairing. It was a kind of fabric, or something, that would actually repair itself. And he had an artifact with him that was some kind of remote control device, and that was taken away from him.

He was the survivor of a crash?

[pause]

No.

A time traveler?

You know everything, don't you?

No, but you're giving us verification.

I mean, it's just so incredibly complicated. It's so complex it's possible that no one person has all the information. Most of the agencies don't know what the other agencies know and everything is heavily compartmentalized right up the wazoo. No-one talks to anyone else about this stuff. Sometimes entire projects are duplicated at the cost of God knows how many billions because the existence of the other project is unknown, it's kept from them. I mean, I'm a scientist, and scientists sometimes have one arm tied behind their backs because they can't communicate freely. In fact, they can't communicate at all [laughs]. And there are dozens, hundreds of classified projects, I mean major ones. It's just a total mess.

Look, there are many groups of ETs, and besides our own ancestors are mixed in there. There are time loops upon time loops, and it's all a mess. You'd need an IQ of 190 to figure it all out.

Tell us about the time loops. By the way, can we ask you again.... you've not heard of Dan Burisch?

Not that I remember. It's not familiar to me.

We interviewed him last month. He was next to John Lear on the web page.

I did see your interview with John Lear, talking about the moon photos and the way they're airbrushed. NASA does that all the time. He's quite a character, by the way. I'd like to meet him one day.

What few people know is that radar reports for the National Weather Service are also airbrushed, so that certain radar images aren't released. I don't mean airbrushed as in by hand. The radar images are electronically filtered using software. Some of these radar traces are huge. In addition, the weather radar won't record traces that are moving faster than a certain high speed, a couple of thousand miles an hour. But there are still traces which need to be removed.

UFOs?

Sure. They're often optically invisible, but usually show up on radar. They're also visible in ultraviolet... I don't think this is generally known by people.

So what can you tell us about the time loops?

Right. [long pause]

The situation with time loops is that there are a large number of parallel timelines, lots of branches. There are no paradoxes. [draws a diagram] If you go back in time and kill your grandfather, that's the grandfather paradox everyone talks about, there's no paradox. When you go back and change the past, it creates a different timeline, which is a new branch of the original one. On that timeline, you'd not be born and wouldn't exist, so that aspect of the paradox is true. Do you see? But on this timeline, which you're on here and now, you do exist, and continue to do so. There's no paradox. It's simple... do you see? You're dealing with different branches of a kind of time tree. No principles get violated. All future events are possibilities, not certainties. That's kind of pretty important, an important... distinction. That's really all I can say about that.

Do you know anything about chemtrails?

OK. Chemtrails were developed by Edward Teller and are basically the seeding of thousands of tons of microparticles of aluminum on the upper atmosphere to try to increase the albedo of the planet, the reflectivity of the planet, because of global warming. Now, gold microparticles, real gold, were used once in a similar

situation on another planet, but I guess they had lots of gold, and we used aluminum instead. Global warming is partly because of the greenhouse effect, and that certainly makes things worse, but most of it is because of increased solar activity. Solar activity is the real problem.

Why isn't this information in the public domain? It seems like people should know and would like to know, and there's no security risk if what you say is true.

Scientifically, it's just a total gamble. Not nearly enough is understood. It may work, or maybe it won't. It could easily make things worse. There may also be health side-effects, weather side-effects, God knows what. It affects the whole planet and here you have a unilateral, non-democratic decision, unconnected with the political or democratic process, to launch a huge technological special project that affects everyone on earth. If that's not controversial, I don't know what is. The solution is to keep it secret. It's the usual kneejerk solution, too.

Will it work?

I don't know.

Is this also connected with weather wars?

[pause]

Yes, there are weather wars. The Air Force will own the weather within two years.

What else can you tell us?

Read The Report from Iron Mountain. Much of that is true. I was working with a group down in [_____]. They called us in and passed out a report. The weird thing is that it wasn't even connected with what we were working on, and it came just right out of the blue, out of nowhere, and none of us were expecting it. The guy said, and I'll never forget it because it struck me as just wrong: "There are the wolves and there are the sheep, and we are the wolves." Then they told us to go and read the report, and that was that.

There wasn't any choice, and there still isn't. The way they see it is there are too many people, and, you know, they're right. That's true. So they figure they need to eliminate them and they're planning solutions to this. I happen to think it doesn't have to be that way. Apart from what I've mentioned so far about the spacetime problems, the problem is overpopulation. It's as simple as that. There are programs to reduce global population for everyone's benefit. Believe it or not, the intent there is positive. It was put together by Kennedy way back then. The RAND Corporation was involved, and one of the Rockefellers, I forget which one, probably Laurance, I think.

By killing people off?

Basically, yes. Artificial viruses that have been deployed using a number of means and are hard to detect or

identify and nearly impossible to cure. Medical people in the public domain can't identify what's happening.

How do you feel about this personally?

Very mixed. [pause]

As an individual flesh-and-blood human being, I'm appalled. And as a scientist trained to look at things from a high vantage point, a high overview, I have to say that I can understand the thinking.

You have to understand that I'm not defending or condoning this. It's just a comment from an abstract scientific perspective. But the problems we face on this planet are so huge that very few people have the training or experience to view it all, to see it all in the same field of vision.

My situation was different, and I got a chance to see a lot of things because of the nature of my work. Most people don't see it all. But I've worked with many agencies, and I have the big picture.

Do you know that it's legal to test biological and chemical agents against US citizens? It's legal. You know, all that has to be done is to get the approval of the mayor of the city, or his equivalent in any area. Or some representative official. No-one knows this, but it can be checked out. Go look it up. It's all carefully hidden away in the law somewhere, but it's all in the public domain. It's all there.

You've revealed a whole lot of extraordinary material here in our conversation. What's the most important message you'd like to leave people with?

Look, I don't want to shock anyone, but I'm not optimistic. The problems facing us as a race on this planet are huge. I don't believe most civilians are ready and able to comprehend and deal with the sheer scale and complexity of it all. They have enough trouble managing their everyday lives, and these problems are on a completely different level. Overpopulation is really the biggest issue. Everything else facing us is connected with this.

You see, I can understand the military taking matters into their own hands. If there was full disclosure of all the problems, and all the proposed solutions, do you really think it would help any of us? I suggest the answer is probably not. It would just complicate matters further.

But deep down I do feel that everyone should know these things, or else I would not be talking with you. The essential message I want to leave with is that I do actually hope and want to believe that we as a people can handle all this, but sometimes I wake up in the morning and doubt it, but deep down I want people to know the important things that have been kept from us all. But sometimes I do wonder. You don't know what I haven't told you.

Update February 2007

http://www.projectcamelot.net/livermore_physicist_2.html

Dan Burisch's testimony

In our [first interview](#), Henry told us he had never heard of Dan Burisch. Because parts of Henry's story seemed to overlap with Dan's, we strongly urged him to view our three part [Dan Burisch video interview](#).

On 27 September, three weeks later, we received the following e-mail. It's quoted verbatim and in its entirety.

Dan Burisch is telling the whole truth.

I confirm this.

timelines and all

best wishes

This was of extreme importance, and we checked this with Henry in person as soon as we could. It appears that Dan's claims – as extraordinary and incredible as they may seem – are true.

Henry did not comment on J-Rod, the treaties, or Lotus, as he has no experience or knowledge of those. But he did confirm that the greatest secret in the classified world – about which many insiders themselves have *not* been briefed – is that there is a complex problem concerning alternative timelines, that some of the visitors are indeed humans from the distant future, and that there are significant issues with a possible future event which may seriously affect the earth and its population.

The last of these is the reason that all this has been kept so highly classified, and why disclosure is so problematic.

Roswell

The Roswell visitors were future humans – as Dan Burisch has stated. They were not from another planet, but from a future Earth – stepping (which is a better word than "traveling") back in time to 1947 to attempt to deal with the problems which had occurred in their history. Apparently, Dan was also correct in that the Roswell visitors were from earlier in the future than some other visitors who arrived subsequently. But Henry didn't give details or time frames.

The Roswell visitors were on a purely altruistic mission. They did not have to do this, but chose to... out of compassion. But the mission went disastrously wrong – not just because they crashed (an accident caused by high-powered radar – later the military realized this and adapted the radar as a weapon), but because they had a device with them which was their only means, as an orientation device in time and space, to get them home and back to their own time.

The device was a little box, far smaller than the "Looking Glass" that Dan Burisch and Bill Hamilton describe as being subsequently utilized by military scientists in various experiments. When the box was acquired and investigated by the military, this became a catastrophe in itself. It made the timeline problem many times worse, because this both introduced the time-portal technology to us at the wrong time... and also told the military what lay ahead.

Henry could not stress too strongly how totally calamitous for us all the Roswell incident was. It was a major, major

setback, right at the start of the future humans' project to help fix the problem.

Since then, there have been continued attempts by the future humans to remedy the exacerbated situation. This is what has caused an overlay of timelines, creating a tangled complexity which apparently is challenging for even the most brilliant present-day minds to understand fully.

We asked Henry why the disks kept on crashing, almost year after year. He said that it seemed strange that the visitors had not evaluated the risk from radar before they returned in time, but he explained it was just very dangerous for them to be here for a variety of reasons, despite their advanced technology. Crashes have been caused by many factors, including offensive action. Importantly, Henry emphasized that the Roswell visitors were *not* the Grays. (He did not mention who the Grays were.)

NOAA, the Dark Star, and global warming

Henry at one point did some work with NOAA (the [National Oceanic and Atmospheric Administration](#)) and it was there that he learned about what he called the "second sun". This is a massive astronomical object which is on a long elliptical orbit around our own sun, on an inclined plane to the rest of the planets. It's now approaching, and is causing resonance effects on our sun in various ways. A small organization within NOAA is aware that this is a cause of the warming of *all* the planets, not just the Earth. This information is classified, but has been known for a number of years.

We told him about Andy Lloyd's excellent '[Dark Star](#)' [website](#), which he had not seen before. We also offered to send him Lloyd's [book](#) 'The Dark Star'; but he declined, saying that there was a risk that it might 'front-load' him too much before he had the chance to recall more information.

This issue is connected with the Roswell catastrophe described above. The problems the future humans were attempting to address were multiple, but principally – as Dan Burisch has stated on many occasions – featured a possible event triggered by a massive 'spike' of solar activity at some point in our currently near future.

Henry, like Dan, is at pains to emphasize strongly that this event is only possible (having been observed in Looking Glass devices in a possible future)... and currently is evaluated to be unlikely.

Henry explains that the increase in solar activity is caused only in part by the 'Dark Star', multiple factors being at play. These are complex. Some of them are on a galactic scale, and are associated with natural, periodic events which the Earth has suffered through a number of times previously. What makes this particular time completely unique for our planet is that there is a convergence of serious factors – such as carbon emissions, overpopulation, and our propensity for choreographing war – all of which combine with these major, cyclic and solar events to simultaneously threaten the well-being of ourselves and the biosphere.

Mars

Henry confirmed the existence of a large manned base on Mars, supplied through an alternative space fleet and also through stargates.

Signal non-locality

Henry told us that he had personal experience of interfacing with a team which effectively conducted Alain Aspect's pivotal and conclusive 1981 experiment to prove Bell's Theorem, under the auspices of a classified project at Livermore in the late 1970s. The results obtained were never published in journals - as is usual in the case of "black budget" research.

The mathematical physics is complex, but the technology developed is now regularly used to communicate instantaneously across vast distances.

The disk shot down at Hunter Liggett

We asked Henry to tell us more about this event. He gave the location of the incident: within a mile of the center of

[this map](#). It occurred in late 1972 or early 1973. His team were testing experimental laser weapons, targeting various materials in the field environment. Suddenly a disk-shaped craft appeared out of nowhere - measuring about 100 feet diameter by 25 feet high. It was about 150-200 yards away. Someone shot at it with Air Force experimental laser which was under test at the time. The primary laser system was contained and operated from the back of a slightly modified M-35 2.5 ton truck called a "Deuce and a Half". There was no visible external damage from what Henry could see or remember, but the craft was disabled. Three small child-like aliens (not classic "Greys") were captured, alive and in good health, and were transferred to a Nike base located in the hills near Tilden Park, directly east of Kensington, CA. All this happened very quickly and was quite a shock to all concerned.

17 February, 2007

Update May 2007

http://www.projectcamelot.net/livermore_physicist_3.html

Our last communication from Henry was on 30 March, 2007. Since then he has been totally silent, despite all our efforts to re-establish contact. Prior to his last communication, he had told us that he was being 'coerced', and that he feared he might be obliged to cease communication with us.

Although he was very careful (and sometimes enigmatically so) with his messages - which reached us through a variety of sometimes very creative means - he was also under no illusions about the capacities of some agencies to monitor information; see below for details.

We continue to regard Henry as a good friend whom we'd grown to like, admire and trust. We miss his wry messages, his sparkling humor, and his strong principles and values. Wherever he is and whatever he is doing now, we hope he is safe, and wish him well. We assume that if he's still alive he'll be reading this page. Henry, we miss the lassi! It just wouldn't be the same without you.

What follows is a further compilation of information of interest. Although some of it is literally incredible, we believe he has always told us the truth.

Monitoring

Henry warned us that there exists advanced technology that can monitor conversations even in the outdoors. He told us that satellite lasers now have the capacity to pick up vibrations on a person's clothing. Monitoring speech vibrations from a glass window pane is elementary, and is older technology.

This is important for us all to understand: bugs no longer need to be physically planted in someone's apartment. Cellphones can also be activated to relay conversations, even when switched off; the only true safeguard is to remove the battery. Our conversations can be heard almost anywhere, at any time.. if the agencies choose to listen in.

9/11

Henry told us that besides knowing way beforehand that something like this was planned (see his first interview), he'd been briefed about it in detail a few hours before it happened in his place of work at the time. The briefing took place with a group of colleagues. He reported being shocked not only at the low-key way it was announced, but at the comparative apparent lack of reaction of many of his colleagues. The purpose of the announcement was so that when the employees heard about it on the news

later that day, they would not be alarmed: "When you hear this in the news later today, don't panic, because this is what's going on."

We are of course under no illusions about the importance of this. Five years after the event, Henry may be the first insider to come forward with confirmation that 9/11 was an inside job.

Further details:

- The planes that hit the twin towers were remotely controlled (over-riding the pilots, and with software modifications that would permit tight turns that would normally be impossible due to autopilot default limit settings). The remote control was enacted from thousands of miles away.
- The plane that hit the Pentagon was a small, remotely piloted Navy jet. A full-sized Boeing 757 could not have been used because the aerodynamic ground effects would have prevented it coming in so low at full speed without it having to slow right down as if to land.
- The well-publicized cellphone calls had been fabricated.
- He also thought that control over Flight 93, which either crashed or was shot down over Pennsylvania, had been lost, and that that part of the plan had gone

wrong (there had been another targeted building, but he did not know which one).

- When we asked what had happened to the passengers and the plane of Flight 77 (the plane that supposedly hit the Pentagon), he replied that he did not know.
- Osama bin Laden had nothing to do with any of it apart from the fact that he was a USG asset.

He told us that that was all he knew.

Multiple timelines

We received this e-mail message from Henry in February 2007. We reproduce it in its entirety.

Do we exist on multiple timelines? Your reality, in one way, depends upon "your" perceptions, awareness, selections... from a vast ocean of "probabilities"... but this is only an extremely limited model to work with in an attempt to conceptualize an answer. The English language alone does not accommodate for communicating an answer to this question. Most humans in today's Earth-bound world cannot grasp an answer to this question due to lack of exposure to other aspects of "reality". The question itself is not complete, again, due to the constraints inherent in most world languages (the languages being at best, related to four dimensions) (or on the other hand, utilizing "time" as a part of the language(s)) and possible non-exposure to other reality sets, by the person attempting to ask and to understand the nature of so-called timelines, etc. The concept of timelines is only a model attempting to explain what cannot be explained in "words" here. There ARE other communication modalities available to us here, which can aid in understanding certain concepts. Explain colors to a person who has never had sight. Explain this world, as you know it, to an unborn child, who has active senses, but yet to put them to use in our "world". Remember the story of the Flatlanders - or even Sphereland? At this moment, the focus should be on waking the people preparing them for a "reality" shockwave... to minimize suffering. Best Wishes.

Stargates

Regarding Montauk, Henry said most of Al Bielek's information is correct. There are apparently several kinds of stargate, notably: (a) the kind where you step through a portal and leave the device behind, and (b) the kind where you take the device with you.

The latter he said was a bit like "Think about where you want to go, and you're there." The mental interface is significant, apparently. He confirmed that as far as he knew Dan Burisch's information about stargates was 95% correct, but the missing 5% was that he had no knowledge of the large-scale Looking Glasses Dan described. (We showed him Dan's diagrams and also Bill Hamilton's source's text.) Henry emphasized that this didn't mean they didn't exist, because there was so much compartmentalization - but simply that he had no knowledge or experience of those devices.

We showed him Dan's diagrams in person. We watched him while he examined them carefully. Then he suddenly said: "Did he tell you about the one in Iraq?" We asked him whether he had not heard that part of Dan's interview. Henry told us that he'd not finished watching the videos. We asked him what he knew. He said the Iraq stargate was what the Iraq war was really all about, that its location was one of the biggest secrets, and that the war was at least partially about control of it. We asked

him how he knew all this - did he read it in a briefing document? No, he said, not a briefing document. The only thing he would say was that it was "first-hand knowledge".

The distant future

Henry told us that in approximately 6,000 years time the Earth will be practically barren, and there will be an attempt to repopulate it. He said that large numbers of children have been abducted from the present and taken to the future Earth, because their genome is undamaged. (In future history the imminent catastrophe significantly damages the human genome.)

He also confirmed that somewhat later than 52,000 years time, the Looking Glass data seems to go blank and no further information is accessible. This is exactly what was stated by Dan Burisch. (This information was given in a meeting. Henry finished the sentence for us as we were asking the question.)

(Note: Henry clearly confirmed the existence of "Looking Glass" devices which could "see" into the future, or into possible futures. It was the details of the type of technology described by Dan Burisch (see this page) which Henry was unable to confirm personally.)

Henry told us that he had thought that there was some kind of barrier in place which meant that future humans were only able to visit us at certain intervals of about 6,000 years. He stressed that he didn't know much about this. Interestingly, a quick calculation shows that concerning the two principal dates frequently referenced by Dan Burisch, $45,000 = 7 \times 6,500$ and $52,000 = 8 \times 6,500$. This struck us as potentially significant. We had wondered about why there had not been visiting future humans from the intermediate periods of 46,000, 47,000, 48,000 (and so on) years in the future. Henry seemed to be offering one explanation.

Incredibly and significantly, it seems that the Mayans (whose famously accurate calendar ends in the year 2012) apparently had access to information left to them by visiting time travelers.

An environmental threat

Henry very much wanted to visit Egypt. He was quite anxious about it, and told us it was a problem. When we asked why, he said that there was very little remaining time in which to travel there. We pressed him for a reason, and he responded that it was not connected with war or politics. We pressed him further, and he eventually said simply: "an environmental threat". He refused to elaborate, nor would he reveal how it was he had access to this information.

Underground and undersea bases

Henry confirmed that many undersea bases exist.

Chaotic resonating circuits

Henry elaborated on the chaotic resonating circuits he mentioned in our first interview. He confirmed that they were relatively cheap and easy to make, and that the information, in segmented pieces, had been fairly widely available in a certain academic community in the 1970s. He had retained no records of the circuit diagrams, but intriguingly he said he was 80% confident that he would be able to locate them if he spent time searching public domain records in a particular university library. We know

the location but for understandable reasons are not revealing it at this time.

Important contacts

Henry on several occasions referenced and strongly recommended the work of Bernard Pietsch, Stan Tenen, and Richard Hoagland. He maintained that Pietsch knew everything there was to know about the Great Pyramid; that Tenen was an inspired genius; and that Hoagland knew a very great deal of accurate information about the solar system.

Mars

The story appears to be extremely complex, and that may be an understatement. Henry fed us snippets on an intermittent basis. These were sometimes very enigmatic. What we were able to gather together was this:

- Henry told us that the Mars base has a large population – 670,000 as of a few years ago. This seemed a huge number to us. We asked if these were all human. "It depends what you mean by human", came the reply.

The base has been in existence for an extremely long time ("tens of thousands of years"), and its population has waxed and waned over the centuries. It lies "at the bottom of an ancient seabed". It is "not far" from the location of this NASA photo, taken by the 1976 Viking 2 lander on Mars' expansive Utopia Planitia ("Nowhere Plain", sometimes referred to as "Utopian Plain").

- Henry stated that the most recent NASA images, discrediting the notion of a "Face on Mars", have been doctored, as have the colors of the Martian sky on most officially released NASA photos. (It is apparently more blue than we are permitted to believe.)

- The Anunnaki are one part of the mix. Henry referred to them a number of times as being operational in present time. He said that they originated from another star system, but he could not remember where. The Anunnaki is our name for them, and they are the same race referenced and described in Zecharia Sitchin's work.

The Anunnaki themselves are split into a number of factions, some of which are friendly, and others not. The most sinister thing he alluded to was that one faction of the Anunnaki sometimes preyed on human flesh, having acquired a taste for it. Other factions of the Anunnaki sought to prevent this. Such was the extreme nature of this piece of information that (in conversation) Henry was

obliged to make repeated oblique references to it before we finally grasped what he was trying to tell us.

Click on the image on the right to read a screen shot of an e-mail we received which conveyed a very small part of this story. Note Henry's emphasis on the word "appears" (typical of his cautious and exact approach), and the typo in "Sumerian". The e-mail is presented exactly as received.

- Transport is by two means: stargates for personnel and small items, spacecraft for larger items of freight. The alternative fleet is codenamed SOLAR WARDEN.

We had first heard of this from another source, and queried Henry about the codename. We sent him two separate messages, each simply of one word: SOLAR, and then WARDEN. We offered no context, or reason for our communication.

The reply came immediately in three e-mails, each from a different address. The first said MARS, the second said ALTERNATIVE, and the third had as its subject "Not listed here" and gave this URL as its only content. We were impressed.

- Most controversially, Henry gave several hints, on separate occasions, that he had been to Mars himself. The first occasion was in conversation, when he was talking about the base. We impulsively asked him if he had been there.

There was a very long pause. Eventually he smiled and said: "I played a lot of ping-pong and watched a lot of TV". He repeated this obscure allusion later on two further occasions. Every way he referred to the base was consistent with his having visited it personally.

Later, in separate conversation, he said that a journey through a stargate was "instantaneous", and he gave the impression that the experience of the stargate transition was at once disorienting and exhilarating. He described the appearance of a manmade stargate as a featureless gray surface. Natural stargates, he said, have a different appearance which is much harder to detect.

He appeared to agree with us strongly when we remarked that the prime protection of claims of this nature was their sheer unbelievability.

We have withheld this part of Henry's story thus far because of the obvious risk that this may appear to discredit him in the eyes of some. Intellectual honesty compels us to report this, now that Henry appears to have been silenced.

Update December 2007

http://www.projectcamelot.net/livermore_physicist_4.html

The Report from Iron Mountain

For this update, Henry specifically asked us to refer again to The Report from Iron Mountain, which he spoke about in our first interview. For those unfamiliar with the document, this is the detailed report by a major think tank that was commissioned by JFK in the early 60s, briefed to focus on emerging major problems of the world in the post-war era. Although it exists more or less in its entirety, Henry was adamant that a false introduction had been added to the Report as damage control after it had been widely leaked and published as a book. The idea was

then 'seeded' that it was imaginative fiction. Henry is adamant that it is not fiction.

To summarize the document is impossible in a single paragraph. The relevance to the present day is that the problem of the Earth's rapidly growing population is one of the core themes. Henry states that most of the recommendations of the think tank report have now been implemented.

Henry had been given the official document to read in a government meeting in Tucson, Arizona, in 1986, in which a high-ranking military briefing officer made this

statement, in connection with the document: "There are sheep and there are wolves. We are the wolves."

Threats to life as we know it

Henry's reason for coming forward again is that he is concerned that we are in deep trouble. He has watched most of Dr Bill Deagle's December 2006 Grenada Forum lecture and confirmed to us that much of what he heard Bill Deagle speak about was accurate.

Some of the important information Henry gave is summarized here:

1) Stealth pathogens have been covertly deployed with the intention of reducing the world's population. Henry was aware of many other programs besides the weaponized Avian flu deployment described in detail by Bill Deagle. Weapons that are genetically selective (racial) were also mentioned. Also, "Environmental threats" he had referred to in his previous update here, were reiterated.

2) Attention should be paid to Alex Jones's documentary Endgame, which documents comprehensive and well-established plans to reduce the world's population to a manageable 500 million. (This is also reported in detail by Deagle.)

3) Naomi Wolf is accurate in her assessment of the coming threat to US democracy, brilliantly laid out in her book The End of America.

4) It is likely that there will be an economic meltdown in the very near future, starting with the dollar, then spreading to the pound and then the euro and onwards. This could happen at any time. In an extreme case, cash holdings may be next to useless. Bartering of skills and commodities might be a useful alternative for survival during those times. Water purification facilities are a good investment. Psychological/Spiritual (not religious) focus is Most important for one's readiness.

5) A Solar CME (Corona Mass Ejection) is likely, but in Henry's words is "Russian Roulette" as whatever transpires depends on the position of the Earth in its orbit around the sun when it occurs, and also - for specific global areas - on the rotation of the Earth itself.

6) Henry suggests those with the means to do so to find a safe place as soon as possible. It should be away from coastal areas and other locations vulnerable to flooding; be away from earthquake fault zones; be away from major conurbations and population centers; ideally have at least part of the dwelling against a hillside or under the ground; and have reliable access to uncontaminated fresh water and food.

7) To protect against the EMP (electromagnetic pulse) that might be associated with a Corona Mass Ejection or EMP devices, electronic components should be (a) wrapped first in cotton or natural cloth (an insulator) and then (b) wrapped in aluminum foil, or buried in the ground or stored in a metal container.

8) In the event of a heavy EMP, any vehicle with an electronic engine management system would be vulnerable to being rendered useless. A reliable powered vehicle to have would be a diesel-engined car or truck, old enough to contain no electronic components. Bicycles are a good asset.

9) Ham (Amateur) radio systems may be the only reliable means of communication for local and global communications. Even these systems may fail temporarily to some degree for direct, long distance communications,

if the ionosphere is perturbed by HAARP-like systems or Solar activity.

10) Vitamin D3 (5000 IU per day) provides excellent cheap insurance against viral epidemics, whether natural or engineered. Dark-skinned people may require slightly higher doses. More than 5000 IU per day is not recommended on a regular basis. D3 has many additional benefits to include telomere protection. Ten to twenty minutes of exposure to sunlight (on your skin) will generate more than enough D3, but for those who are indoors most of the day (elderly or office workers), or those who are in high-latitudes (during winters) should compensate with approx 5000 IU per day of D3.

11) Working free energy systems have been developed, in essence making use of the Casimir effect (which Henry explained would come as no surprise to most "physicists"). In general, the resulting technologies have been withheld from the public not for economic reasons such as oil interests, but because it had been judged that widely available free energy would only speed the unchecked growth of the world's population - this being regarded by the Powers that Be as the most pressing problem of our times. Due to many religious and other social constructs, addressing the population growth issue appears to have no gentle, timely, easy solution.

Apocalypse now?

Maybe, or maybe not. Close observers of the current global situation differ in their views and their evaluations. Many are optimistic that corners have been turned. Dan Burisch has very recently stated (November 2007) that he believes we are safely on Timeline 1 (as opposed to the catastrophic 'T2'). Others are not at all sure that we are out of the woods on all economic and geopolitical counts and fear that things may get a lot worse before they get better.

Forewarned is forearmed. For the record, Henry believes that it is almost too late to do anything whatsoever except safeguard oneself personally (especially through nondogmatic-religious, mental/emotional/spiritual preparation). It is to his credit that he has allowed us to publish this update. Those familiar with Bill Deagle's views will know that he too has said - a full year ago - that we are at "one second to midnight".

Two statements are important here:

We at Project Camelot believe that it's not too late to spread the word - if word needs to be spread. Every life saved is a gift. And it's possible that by marshaling positive intent on a widespread scale, disasters may be minimized or even averted altogether. While we're watching the situation very carefully, those who listened to Deagle's December 2006 lecture will note that nothing too bad has happened yet. If we make it through 2008 as another 'reasonably normal' year - with no nuclear detonations, terrorist attacks (real or fabricated), pandemics, or economic meltdown, then there may be good reason for renewed optimism. We live for that day.

Separately, Henry has asked us to state on his behalf that he is fiercely critical of anyone who is producing information or making money on the back of potential catastrophe by selling products or information at anything other than reasonable normal prices. (Of course, we agree.) He believes that all helpful information must be free and available to all people, with consideration given that one must weigh if what is disseminated will provide the greatest good for the overall future of humankind.

Henry states: "Be a part of nature and let go of your fears. Go with the flow. A lifetime is short. There is not much time. So Slow Down as you travel through time and enjoy each moment – the here and now."

Other information

We could never have an in-depth conversation with Henry without our touching on other topics - some of them in considerable depth. It had always been that way.

- We heard more about the Mars Colony (old, multifunctional, the largest of several on the planet, almost completely underground, and occupied by many diverse groups);
- We were told that the terraforming of Mars has begun;
- Global warming is natural and not created by human activities. It is well known that all of the planets are in a state of global warming during this period. The destruction of the world's forests are of great concern to Henry.
- Henry confirmed that David Wilcock's contact 'Daniel' was fairly accurate in his depiction of the Montauk project (the one correction being that the means of transport to Mars is now via jumprooms rather than jumpgates)
- Henry confirmed that Bill Deagle's information is fairly accurate (with the caveat that Henry had not heard of Project Omega, and that some of the 'electronic cage' scenarios referenced by Deagle were plans which had not yet been implemented);
- We learned that the alien visitor referred to in his original interview was slim, although human-proportioned – was low in mass, was dark in color, had "squinty, slanted eyes", did not appear to attempt any form of communication (possibly due to the condition of "his" health), and survived for about a week, his death probably being caused by poor treatment and a couple of portable devices having been (ignorantly!) taken away/removed from him;
- Henry estimated that there were, on Earth, currently at least 40 differing groups of "alien" visitors, from different places or times, and with many different agendas;
- Henry told us again that Alpha Centauri A was an inhabited system (confirming what we had learned in our first interview);
- We asked Henry what he knew of exotic propulsion systems. He replied that there were many different technologies. One that he knew a little about featured the creation of a 'gravity well' in front of the craft – the system remotely looking like the physical construct of a small linear accelerator (wave-guide) projecting off of a central "orb". He stressed that this was a very loose analogy. This is used by some of our own advanced vehicles.

Other technologies require pilot(s) who interface consciously with the craft, as was reported by Col. Philip Corso in his book *The Day After Roswell*. Remotely similar to system control in the Montauk Projects, and described in detail by David Wilcock in his interview with us here, the emotional focus of the pilot must be extremely stable (more so than can be attained by almost any present-day earth humans). For this reason, some of the visitors - who were time-traveling future humans - had been 'modified' biotechnologically to optimize the interface.

- We asked Henry if the Apollo astronauts had actually gone to the moon. This was a question that had not actually previously occurred to us in earlier meetings.

There was a long pause before Henry replied saying: Yes, they had. But it was not a simple answer.

Most of the missions did indeed go to the moon, but some photos and film footage were fabricated for PR purposes, and - remarkably - some advanced technology was borrowed: a lightweight nano tech-skin shielding combined with a charged-field technology were utilized on some of the craft to provide very effective radiation shielding, combined with other technologies used to protect the astronauts from Gamma and other hazardous radiations and energetic particles during the journeys. Additional advanced "alien" technologies were added to land the Lunar Module and assist take-off from the moon.

Some Apollo astronauts were aware of these technologies (though only a couple were aware of the alternative space program). This accounts for some general reluctance to be interviewed or to speak openly on the subject. Their anger at those who claim they never went at all is understandable, because they did indeed reach the moon. They were very brave men... and they had some help.

- Incredibly, Henry stated that the one moon we have now is known to have been engineered into position eons ago. When we asked if this was done by our ancestors or by our creators, the answer came back "both".
- There is sentient life on a number of other planets in the solar system. General conditions 'out there' are not always as has been presented. Henry stated that Mars had experienced several catastrophes, not all naturally caused. He told us that it was known that the Van Allen belt had been created artificially a long time ago to provide protection to the Earth and its extraordinary teeming life. The present condition of the Van Allen belt is in a functionally deteriorated state. It was also put in place to prevent "primitives" from leaving Earth before certain criteria were met.
- Henry continued to urge us to interview the great writer and futurist Arthur C. Clarke, who was 90 on 16th December 2007. Those who saw Clarke's magnificent movie 2001 will remember that an alien black monolith was discovered in the crater Tycho. Henry told us that certain lunar magnetic field anomalies (just as in the film) have been discovered. But he does not have any information about what was discovered. It seems that Arthur C. Clarke knew exactly what he was writing about. Keep an eye out on Europa!

The Secret Space Program: for our benefit, or that of others?

Maybe most importantly, Henry held the strong opinion that what has become frequently referred to as 'the secret space program' is well-intentioned (at least one of the programs) and is being managed by a group with the purpose of ensuring that the human race will survive, come what may.

For that reason, Henry was extremely reluctant to do or say anything to jeopardize its continuation. He urged us to support his stance.

In answer to our many questions, he explained that a classified, alternative space program, not in any way connected with the use of rocket motors, began soon after World War II and that other agendas - such as to radically reduce the world's population, and keep the remnants under tightly corralled control - were being pursued by entirely different and separate groups.

He emphasized that there was extreme diversity and compartmentalization among behind-the-scenes

governing groups on Earth (just as among the alien visitors), had not seen any evidence that one single group was in overall control, and that their differing plans and agendas for the human race were not in any kind of strong alignment.

Most interestingly, he told us that the Department of Homeland Security (apparently the name bears little relation to its function) had been established partially as a co-ordinating organization for at least some of these groups (many of them intel) after other attempts to facilitate the groups working together to share project information had failed. Henry had been part of some of those attempts, which is one reason why he is so unusually well-informed in diverse areas (compartmentalized for many people) where much information is not shared at all.

This extreme compartmentalization seems to explain the confusion about how it was that the controllers, whoever they are, appear on the one hand intent on exterminating or controlling huge numbers of people... while on the other hand are actively reaching for the stars. Henry again stressed the very high level of complexity, urged us to take our attention off intriguing issues such as Mars, exotic technology and alien visitation, and focus instead on immediate threats to our survival, freedom and reorganization closer to your home. We acknowledge his wish and hope that we have represented him fairly and accurately.

It's not too late

Henry told us many times that he did not believe that essential information could possibly be presented to the public in such a way that they would be able to understand, accept and work with it in a timely, calm and rational manner. He feels that the Powers that Be are (in general, planned genocide notwithstanding) doing their best to handle an overwhelmingly difficult and complex situation by keeping the public uninvolved. He believes that it now appears to be too late to do anything to change the direction of many already implemented major global agendas. Unfortunately, critical situations may soon become quite apparent to us and may leave us in a state of confusion and chaos. Only prepared minds will be able to calmly sail through the stormy seas ahead.

We at Project Camelot believe strongly that the public has a right to know their history; their identity; their future; the problems the world faces; who our real friends and foes are; and everything that has happened and is happening in our own solar system and on the planet which is our only current home.

This is our only area of disagreement with Henry, who has become a close friend. We will never believe it's too late. We encourage everyone reading this page to copy its contents in full for the widest possible distribution.

17 December, 2007
